

TROPICAL CYCLONE BULLETIN NO. 19

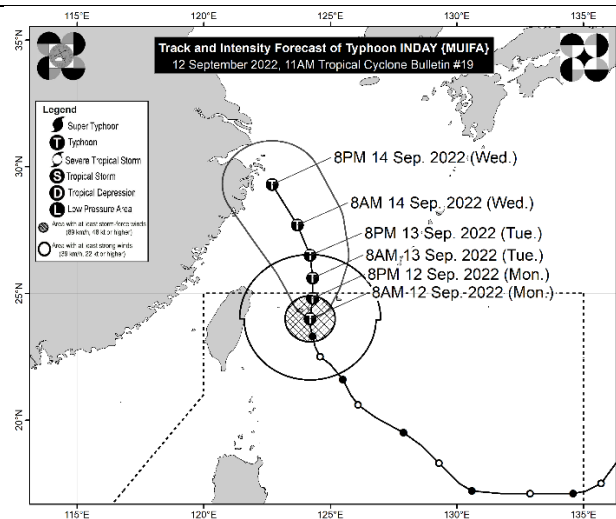

Typhoon INDAY (MUIFA)

Issued at 11:00 AM, 12 September 2022

Valid for broadcast until the next bulletin at 5:00 PM today

TYPHOON "INDAY" FURTHER WEAKENS AS IT MAKES ITS CLOSE APPROACH TO ISHIGAKI ISLAND OF SOUTHERN JAPAN

Location of Center (10:00 AM)
The center of the eye of Typhoon INDAY was estimated based on all available data at 465 km North Northeast of Itbayat, Batanes (24.3°N, 124.3°E)
Intensity
Maximum sustained winds of 150 km/h near the center, gustiness of up to 185 km/h , and central pressure of 965 hPa
Present Movement
Northward slowly
Extent of Tropical Cyclone Winds
Strong to typhoon-force winds extend outwards up to 310 km from the center

TRACK AND INTENSITY FORECAST

Date and Time	Center Position			Intensity		Movement dir. and speed (km/h)
	Lat. (°N)	Lon. (°E)	Location	MSW (km/h)	Cat.	
12-Hour Forecast 8:00 PM 12 September 2022	24.8	124.3	515 km North Northeast of Itbayat, Batanes	150	TY	N Slowly
24-Hour Forecast 8:00 AM 13 September 2022	25.6	124.3	590 km North Northeast of Itbayat, Batanes (Outside the PAR)	150	TY	N Slowly
36-Hour Forecast 8:00 PM 13 September 2022	26.5	124.2	680 km North Northeast of Itbayat, Batanes (Outside the PAR)	140	TY	N 10
48-Hour Forecast 8:00 AM 14 September 2022	27.7	123.7	790 km North Northeast of Itbayat, Batanes (Outside the PAR)	140	TY	NNW 10
60-Hour Forecast 8:00 PM 14 September 2022	29.3	122.7	950 km North of Extreme Northern Luzon (Outside the PAR)	140	TY	NNW 15

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT

No Tropical Cyclone Wind Signal is currently in effect.

TROPICAL CYCLONE BULLETIN NO. 19

Typhoon INDAY (MUIFA)

Issued at 11:00 AM, 12 September 2022

Valid for broadcast until the next bulletin at 5:00 PM today

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall

Typhoon INDAY is unlikely to directly bring heavy rains in the country throughout the forecast period.

Severe Winds

- The hoisting of Tropical Cyclone Wind Signals is unlikely throughout the forecast period.
- **Gusty conditions reaching strong to gale-force strength** may be experienced over Extreme Northern Luzon today through Wednesday due to the channeling of the typhoon circulation in the Luzon Strait.

HAZARDS AFFECTING COASTAL WATERS

- Under the influence of Typhoon INDAY, a **Gale Warning remains effect** for the seaboards of Batanes and Babuyan Islands. For more information, refer to Gale Warning #4 issued at 5:00 AM today.
- In the next 24 hours, INDAY may also bring **moderate to rough seas** over the eastern seaboard and the remaining northern seaboard of Northern Luzon (1.2 to 3.0 m). These conditions may be risky for those using small seacrafts. Mariners are advised to take precautionary measures when venturing out to sea and, if possible, avoid navigating these conditions.

TRACK AND INTENSITY OUTLOOK

- On the track forecast, Typhoon INDAY will move slowly northward, either pass close or make landfall in the vicinity of Yaeyama Islands this morning, and exit the Philippine Area of Responsibility (PAR) tonight. Outside the PAR region, INDAY will turn more north northwestward over the East China Sea while gradually accelerating.
- INDAY is forecast to gradually weaken throughout the forecast period due to the cooler waters over sea east of Taiwan (resulting from upwelling brought on by the slow movement of the typhoon) and East China Sea, and increasing vertical wind shear along its projected path.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 PM today.
